Professional Summary

Senior Software Engineer with 5+ years of experience building enterprise-scale web applications using React, TypeScript, JavaScript and Node.js across global engineering teams. Proven expertise in frontend architecture, reusable component design, accessibility, automation, performance optimization and CI/CD practices for large-scale products. Currently expanding into AI-powered Full-Stack development using Java, Spring Boot, OpenAI APIs, LangChain and Retrieval-Augmented Generation (RAG) to build production-oriented intelligent applications.

Technical Skills

- **Programming Languages:** JavaScript (ES6+), TypeScript, Java, HTML5, CSS3
- **Frontend:** React, Next.js, Redux, Responsive Design, Accessibility (WCAG), Performance Optimization
- **Backend:** Node.js, Express.js, Spring Boot, REST APIs, JWT, OAuth, Microservices
- **Databases:** PostgreSQL, MongoDB, MySQL, Vector Databases
- **Cloud & DevOps:** AWS, Docker, GitHub Actions, Jenkins, CI/CD, Git
- **Artificial Intelligence:** OpenAI APIs, LangChain, Retrieval-Augmented Generation (RAG), LLMs, Prompt Engineering
- **Tools:** GitHub, Postman, VS Code, Figma, Agile, Scrum, Software Architecture, System Design

Professional Experience

Senior Engineer

Apr 2025 – Present

GlobalLogic Technologies (Client: Adobe)

Gurugram, India

- Developed and enhanced enterprise-grade React and TypeScript applications for global clients by implementing reusable, modular UI components, improving feature delivery consistency and reducing duplicate development effort by approximately 30%.
- Engineered Node.js automation utilities to standardize large-scale pricing token migrations across multiple regional configuration files, significantly reducing manual engineering effort while improving migration accuracy and maintainability.
- Optimized application performance through component refactoring, lazy loading, bundle optimization and efficient rendering strategies, contributing to faster page loads and improved Lighthouse performance metrics across multiple user journeys.
- Collaborated with architects, designers and backend engineers to integrate secure REST APIs, improve application scalability and ensure reliable communication between frontend and backend services within Agile delivery cycles.
- Strengthened engineering quality by participating in architecture discussions, peer code reviews, accessibility validation and CI/CD improvements, helping reduce production defects and improve release confidence across development teams.
- Contributed to enterprise design system adoption by developing reusable UI patterns and enforcing coding standards, resulting in improved maintainability and faster implementation of new product features.

Associate Process Manager (Software Engineering)

Apr 2023 – Apr 2025

eClerx Services Ltd. (Client: PayPal)

Mumbai, India

- Led frontend development for PayPal's global rebranding initiative using React and TypeScript, modernizing more than 150 enterprise pages while improving UI consistency and accelerating global design adoption.
- Built reusable React component libraries and shared utilities that reduced duplicate implementation effort by nearly 35% while improving development velocity across multiple engineering teams.
- Developed Node.js automation scripts integrated into engineering workflows, reducing repetitive validation activities by approximately 60% and enabling faster release cycles.
- Improved web accessibility by resolving WCAG compliance issues through semantic HTML, keyboard navigation and ARIA enhancements, helping deliver an inclusive experience across enterprise applications.
- Partnered closely with product managers, UX designers and distributed engineering teams in Agile sprints to deliver high-quality releases while consistently meeting project milestones.
- Mentored junior engineers through code reviews, technical guidance and best practices for React development, helping improve overall code quality and onboarding efficiency.

Senior Analyst

Jul 2021 – Mar 2023

eClerx Services Ltd. (Client: PayPal)

Mumbai, India

- Designed and delivered responsive React applications using JavaScript and TypeScript, improving user experience across enterprise web platforms while supporting global product teams.
- Implemented performance optimization techniques including code splitting, memoization and asset optimization, contributing to measurable improvements in page responsiveness and user experience.
- Integrated RESTful APIs and backend services to deliver scalable business features while maintaining clean application architecture and reusable frontend modules.

- ## Projects

- Built an enterprise knowledge assistant that combines Retrieval-Augmented Generation (RAG) with OpenAI models to deliver context-aware responses from organizational documentation while minimizing hallucinations.
- Designed a scalable backend using Spring Boot with REST APIs, PostgreSQL and LangChain to orchestrate document ingestion, semantic retrieval and LLM interactions for production-oriented workflows.
- Containerized the application with Docker and designed it for cloud deployment on AWS, enabling secure authentication, modular architecture and efficient retrieval across large document collections.

AI Resume Screening Platform

React — Spring Boot — OpenAI — Vector Database — JWT — REST APIs

- Developed an AI-powered resume screening platform capable of matching resumes against job descriptions using semantic similarity instead of keyword-only filtering.
- Implemented secure authentication with JWT and RESTful services while integrating OpenAI APIs and vector embeddings to improve candidate ranking and contextual evaluation.
- Designed a modular frontend in React with recruiter dashboards, candidate scoring and structured evaluation workflows suitable for enterprise recruitment scenarios.

AI Code Review Assistant React — Spring Boot — GitHub API — OpenAI — Docker

- Built an intelligent code review assistant that analyzes GitHub pull requests and provides AI-assisted recommendations for code quality, maintainability and best practices.
- Integrated GitHub APIs with Spring Boot services and OpenAI models to generate contextual review comments while preserving repository metadata and review history.
- Designed the solution using Docker-based deployment, reusable service layers and extensible architecture to support future integration with CI/CD pipelines.

Education

Bachelor of Engineering (Computer Science & Engineering)
Chitkara University

2017 – 2021
Himachal Pradesh, India

Certifications

- Full Stack Development Certification – upGrad
- Self-directed advanced learning in Java, Spring Boot, OpenAI APIs, LangChain and Retrieval-Augmented Generation (RAG) through production-focused portfolio projects.
