## Professional Summary

Senior Software Engineer with 5+ years of experience building enterprise-scale web applications using React, TypeScript and Node.js. Proven expertise in frontend architecture, reusable component design, automation, accessibility, performance optimization and CI/CD across global engineering teams. Currently building AI-powered full-stack applications using Java, Spring Boot, OpenAI APIs, LangChain and Retrieval-Augmented Generation (RAG).

## Technical Skills

**Languages:** JavaScript (ES6+), TypeScript, Java, HTML5, CSS3

**Frontend:** React, Next.js, Redux, Responsive Design, Accessibility (WCAG), Performance Optimization

**Backend:** Node.js, Express.js, Spring Boot, REST APIs, JWT, OAuth, Microservices

**Databases:** PostgreSQL, MongoDB, MySQL, pgvector

**Cloud & DevOps:** AWS, Docker, GitHub Actions, Jenkins, CI/CD, Git

**Artificial Intelligence:** OpenAI APIs, LangChain, Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Prompt Engineering

**Tools:** GitHub, Postman, VS Code, Figma, Agile, Scrum, Software Architecture, System Design

## Professional Experience

### Senior Engineer

Apr 2025 - Present

*GlobalLogic Technologies (Client: Adobe)*

*Gurugram, India*

- Developed enterprise-grade React and TypeScript applications by building reusable UI components adopted across multiple product modules, reducing duplicate implementation effort by approximately 30%.
- Engineered Node.js automation utilities to streamline pricing token migration across 40+ regional configurations, reducing manual engineering effort by nearly 90% while improving deployment consistency.
- Optimized application performance using lazy loading, code splitting and component refactoring, improving Lighthouse performance scores by up to 20 points across key user journeys.
- Integrated secure REST APIs and collaborated with cross-functional teams to deliver production features across Agile sprints, consistently meeting release timelines for enterprise applications.
- Participated in architecture reviews, peer code reviews and CI/CD improvements, helping reduce production defects and improve release quality across engineering teams.
- Implemented WCAG-compliant accessibility enhancements across enterprise applications, improving usability for keyboard and assistive technology users.

### Associate Process Manager (Software Engineering)

Apr 2023 - Apr 2025

*eClerx Services Ltd. (Client: PayPal)*

*Mumbai, India*

- Led frontend engineering for PayPal's global rebranding initiative by modernizing more than 150 enterprise pages using React and TypeScript while ensuring consistent implementation of global design standards.
- Developed reusable React components and shared utilities that reduced duplicate development effort by approximately 35% and accelerated feature delivery across multiple engineering teams.
- Built Node.js automation tools that reduced repetitive engineering validation effort by nearly 60%, improving release efficiency and minimizing manual intervention.
- Resolved accessibility issues through semantic HTML, ARIA enhancements and keyboard navigation, achieving WCAG-compliant implementations across multiple enterprise experiences.
- Collaborated with product managers, designers and distributed engineering teams to deliver high-quality releases across Agile sprints with on-time delivery.
- Mentored 5+ engineers through code reviews, technical guidance and React best practices, improving onboarding efficiency and engineering consistency.

### Senior Analyst

Jul 2021 - Mar 2023

*eClerx Services Ltd. (Client: PayPal)*

*Mumbai, India*

- Developed 20+ responsive enterprise web applications using React, JavaScript and TypeScript, supporting global product initiatives and improving user experience across multiple business domains.
- Implemented performance optimization techniques including code splitting, memoization and asset optimization, reducing page load times by up to 25% for high-traffic pages.
- Integrated REST APIs and reusable frontend components, improving maintainability and reducing feature implementation effort across multiple projects.
- Collaborated with cross-functional stakeholders to translate business requirements into production-ready solutions, consistently delivering sprint commitments within Agile release cycles.
- Received the **Employee of the Year (2022)** award in recognition of technical excellence, automation initiatives and significant contributions to strategic PayPal programs.

## Projects

---

### Enterprise AI Knowledge Assistant

*React, Java, Spring Boot, PostgreSQL, LangChain, OpenAI, Docker, AWS*

- Developed an enterprise AI knowledge assistant that leverages Retrieval-Augmented Generation (RAG) to provide accurate, context-aware answers from technical documentation, knowledge bases and internal resources.
- Designed a scalable Spring Boot backend to automate document ingestion, vector indexing and semantic retrieval using PostgreSQL, LangChain and secure REST APIs.
- Built a responsive React interface with conversational search, source citations and role-based authentication, and containerized the application using Docker for cloud deployment on AWS.

### AI Documentation Copilot

*React, Java, Spring Boot, PostgreSQL, pgvector, LangChain, OpenAI, Docker*

- Built an AI-powered documentation assistant that enables engineers to search APIs, architecture documents and technical knowledge bases using semantic search and Retrieval-Augmented Generation (RAG).
- Implemented document ingestion, vector embedding generation and contextual retrieval using Spring Boot, pgvector, LangChain and OpenAI while exposing secure REST APIs.
- Developed a React-based interface featuring conversational search, document citations, chat history and role-based access control to improve developer productivity.

### AI Code Review Assistant

*React, Java, Spring Boot, GitHub API, OpenAI, Docker*

- Developed an AI-assisted code review platform that analyzes GitHub pull requests and generates contextual recommendations for code quality, maintainability and best practices.
- Integrated GitHub APIs with Spring Boot services and OpenAI models to review code changes, summarize pull requests and provide actionable feedback with repository context.
- Designed a modular service-oriented architecture and containerized the application using Docker to support scalable deployment and future CI/CD integration.

## Education

---

### Bachelor of Engineering, Computer Science and Engineering

*Chitkara University*

2017 - 2021

*Himachal Pradesh, India*

### Certifications

---

- Full Stack Development Certification, upGrad
- Continuous hands-on learning in Java, Spring Boot, OpenAI APIs, LangChain and Retrieval-Augmented Generation (RAG) through production-oriented AI application development.
