

Shashank Shekhar Singh

Senior Software Engineer - Full-Stack & AI Application Development

+91-9129853380 | shashanknet50@gmail.com | linkedin.com/in/shashesi | github.com/shashank1227 | Portfolio

Professional Summary

Senior Software Engineer with 5+ years of experience designing and delivering enterprise-scale, full-stack web applications using React, TypeScript, Java, Spring Boot, and Node.js. Skilled in frontend architecture, reusable component design, REST API development, microservices, system design, accessibility (WCAG), performance optimization, and CI/CD automation within Agile Scrum teams. Currently building AI-powered full-stack applications using Java, Spring Boot, OpenAI APIs, LangChain, and Retrieval-Augmented Generation (RAG).

Technical Skills

Languages: Java, JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux, React Hooks, Context API, Micro Frontends, Webpack, Responsive Design, Accessibility (WCAG), Performance Optimization

Backend: J2EE, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Node.js, Express.js, REST APIs, JWT, OAuth, Microservices

Databases: PostgreSQL, MySQL, MongoDB, pgvector

Cloud & DevOps: AWS, Docker, Git, GitHub Actions, Jenkins, CI/CD, Maven

Messaging & Architecture: Apache Kafka, Event-Driven Architecture, API Design, Distributed Systems, Software Architecture, System Design

Testing: JUnit, Mockito, Jest, React Testing Library

Artificial Intelligence: OpenAI API, LangChain, RAG, LLMs, Prompt Engineering

Tools & Practices: GitHub, Postman, VS Code, Figma, Agile, Scrum

Professional Experience

Senior Engineer

Apr 2025 - Present

GlobalLogic Technologies (Client: Adobe)

Gurugram, Haryana, India

- Develop AI-powered full-stack applications using React.js, TypeScript, Java, Spring Boot, and Node.js, building scalable user interfaces and backend services for enterprise product ecosystems.
- Design and implement intelligent application capabilities using LLMs, OpenAI APIs, LangChain, and Retrieval-Augmented Generation (RAG) to enable context-aware search, automation, and AI-assisted experiences.
- Build semantic search and knowledge retrieval solutions using PostgreSQL and pgvector, enabling efficient retrieval of enterprise information.
- Design and integrate secure RESTful APIs and backend services while optimizing application performance through lazy loading, code splitting, API tuning, and component refactoring.
- Engineer Node.js automation utilities for 40+ regional configurations, reducing manual engineering effort by nearly 90% and improving deployment consistency.

Associate Process Manager (Software Engineering)

Apr 2023 - Apr 2025

eClerx Services Ltd. (Client: PayPal)

Navi Mumbai, Maharashtra, India

- Developed and maintained enterprise full-stack applications using Java, Spring Boot, React, TypeScript, and RESTful APIs, supporting large-scale global PayPal programs.
- Led frontend engineering for PayPal's global rebranding initiative, modernizing 150+ enterprise pages using React and TypeScript while maintaining consistent design standards.
- Built reusable full-stack components, shared utilities, and service integrations that reduced duplicate development effort by approximately 35% and accelerated feature delivery.
- Developed Java and Node.js automation tools that reduced repetitive engineering validation effort by nearly 60%, improving release efficiency and minimizing manual intervention.
- Mentored 5+ engineers through code reviews, technical guidance, and full-stack development best practices, improving engineering consistency.

Senior Analyst

Jul 2021 - Mar 2023

eClerx Services Ltd. (Client: PayPal)

Navi Mumbai, Maharashtra, India

- Developed enterprise web applications using Java, Spring Boot, React, JavaScript, and TypeScript, supporting multiple global product initiatives.
- Built and integrated RESTful APIs and backend services, enabling reliable data exchange and scalable application functionality.
- Developed 20+ responsive applications and reusable UI components, improving maintainability and reducing feature implementation effort across multiple projects.
- Implemented performance optimization techniques including code splitting, memoization, API optimization, and asset optimization, reducing page load times by up to 25% for high-traffic pages; recognized as **Employee of the Year (2022)** for technical excellence and automation initiatives.

Projects

Enterprise AI Knowledge Assistant - GitHub

React, Java, Spring Boot, PostgreSQL, LangChain, OpenAI, Docker, AWS

- Built an enterprise AI knowledge assistant using Retrieval-Augmented Generation (RAG) with a Spring Boot backend for document ingestion, vector indexing, and semantic retrieval via PostgreSQL and LangChain.
- Built a responsive React interface with conversational search, source citations, and role-based authentication; containerized with Docker for cloud deployment on AWS.

AI Documentation Copilot - GitHub

React, Java, Spring Boot, PostgreSQL, pgvector, LangChain, OpenAI, Docker

- Built an AI-powered documentation assistant enabling engineers to search APIs and technical knowledge bases via semantic search and RAG, using Spring Boot, pgvector, LangChain, and OpenAI.
- Developed a React-based interface with conversational search, document citations, chat history, and role-based access control to improve developer productivity.

AI Code Review Assistant - GitHub

React, Java, Spring Boot, GitHub API, OpenAI, Docker

- Developed an AI-assisted code review platform integrating GitHub APIs with Spring Boot and OpenAI to analyze pull requests and generate contextual code quality recommendations.
- Designed a modular, service-oriented architecture and containerized the application with Docker to support scalable deployment and future CI/CD integration.

Education

Bachelor of Engineering, Computer Science and Engineering

2017 - 2021

Chitkara University

Himachal Pradesh, India

Certifications: Full Stack Development Certification, upGrad | AWS Fundamentals: Going Cloud-Native, Coursera
