

Shashank Shekhar Singh

Senior Software Engineer - Full-Stack & AI Application Development

+91-9129853380 | shashanknet50@gmail.com | linkedin.com/in/shashesi | github.com/shashank1227 | Portfolio

Professional Summary

Senior Software Engineer with 5+ years of experience designing and delivering enterprise-scale, full-stack web applications using React, TypeScript, Java, Spring Boot, and Node.js. Skilled in frontend architecture, reusable component design, REST API development, microservices, system design, accessibility (WCAG), performance optimization, and CI/CD automation within Agile Scrum teams. Currently building AI-powered full-stack applications using Java, Spring Boot, OpenAI APIs, LangChain, and Retrieval-Augmented Generation (RAG).

Technical Skills

Languages: Java, JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Responsive Design, Accessibility (WCAG), Performance Optimization

Backend: Java, J2EE, Spring Boot, Spring MVC, Node.js, Express.js, REST APIs, JWT, OAuth, Microservices

Databases: PostgreSQL, MySQL, MongoDB, pgvector

Cloud & DevOps: AWS, Docker, Git, GitHub Actions, Jenkins, CI/CD, Maven

Artificial Intelligence: OpenAI API, LangChain, Retrieval-Augmented Generation (RAG), Large Language Models (LLMs), Prompt Engineering

Tools & Practices: GitHub, Postman, VS Code, Figma, Agile, Scrum, Software Architecture, System Design

Professional Experience

Senior Engineer

Apr 2025 - Present

GlobalLogic Technologies (Client: Adobe)

Gurugram, India

- Build enterprise-grade full-stack applications using React.js, TypeScript, Java, and Spring Boot, delivering reusable UI components and scalable backend services adopted across multiple product modules, cutting duplicate implementation effort by approximately 30%.
- Design and integrate secure RESTful APIs, enabling seamless communication between frontend and backend services for high-performance enterprise applications.
- Engineer Node.js automation utilities that streamline pricing token migration across 40+ regional configurations, reducing manual engineering effort by nearly 90% and improving deployment consistency.
- Optimize application performance through lazy loading, code splitting, backend API tuning, and component refactoring, improving Lighthouse performance scores by up to 20 points across key user journeys.
- Implement WCAG 2.1-compliant accessibility enhancements across enterprise applications, improving usability for keyboard navigation and assistive technology users.

Associate Process Manager (Software Engineering)

Apr 2023 - Apr 2025

eClerx Services Ltd. (Client: PayPal)

Mumbai, India

- Led frontend engineering for PayPal's global rebranding initiative, modernizing 150+ enterprise pages using React and TypeScript while enforcing consistent global design standards.
- Developed reusable React components and shared utilities that reduced duplicate development effort by approximately 35% and accelerated feature delivery across multiple engineering teams.
- Built Node.js automation tools that reduced repetitive engineering validation effort by nearly 60%, improving release efficiency and minimizing manual intervention.
- Resolved accessibility issues through semantic HTML, ARIA enhancements, and keyboard navigation, achieving WCAG-compliant implementations across enterprise experiences.
- Mentored 5+ engineers through code reviews, technical guidance, and React best practices, improving onboarding efficiency and engineering consistency.

Senior Analyst

Jul 2021 - Mar 2023

eClerx Services Ltd. (Client: PayPal)

Mumbai, India

- Developed 20+ responsive enterprise web applications using React, JavaScript, and TypeScript, supporting global product initiatives across multiple business domains.
- Implemented performance optimization techniques including code splitting, memoization, and asset optimization, reducing page load times by up to 25% for high-traffic pages.
- Integrated REST APIs and reusable frontend components, improving maintainability and reducing feature implementation effort across multiple projects.
- **Employee of the Year (2022)** – recognized for technical excellence, automation initiatives, and significant contributions to strategic PayPal programs.

Projects

Enterprise AI Knowledge Assistant

React, Java, Spring Boot, PostgreSQL, LangChain, OpenAI, Docker, AWS

- Built an enterprise AI knowledge assistant using Retrieval-Augmented Generation (RAG) with a Spring Boot backend for document ingestion, vector indexing, and semantic retrieval via PostgreSQL and LangChain.
- Built a responsive React interface with conversational search, source citations, and role-based authentication; containerized with Docker for cloud deployment on AWS.

AI Documentation Copilot

React, Java, Spring Boot, PostgreSQL, pgvector, LangChain, OpenAI, Docker

- Built an AI-powered documentation assistant enabling engineers to search APIs and technical knowledge bases via semantic search and RAG, using Spring Boot, pgvector, LangChain, and OpenAI.
- Developed a React-based interface with conversational search, document citations, chat history, and role-based access control to improve developer productivity.

AI Code Review Assistant

React, Java, Spring Boot, GitHub API, OpenAI, Docker

- Developed an AI-assisted code review platform integrating GitHub APIs with Spring Boot and OpenAI to analyze pull requests and generate contextual code quality recommendations.
- Designed a modular, service-oriented architecture and containerized the application with Docker to support scalable deployment and future CI/CD integration.

Education

Bachelor of Engineering, Computer Science and Engineering

Chitkara University

2017 - 2021

Himachal Pradesh, India

Certifications: Full Stack Development Certification, upGrad | AWS Fundamentals: Going Cloud-Native, Coursera
